

A One Stop Shop

Servicing the entire value chain

Whether you need just installation or the complete end-to-end solution, from site consultation to charger operations and financing - we offer you the flexibility to choose what serves you best.

With access to a secure regional workforce with an impeccable safety and performance record, we can support your entire commercial fleet portfolio (across metro and regional areas).

Charger Operations & Charge Point Operator

Giving you confidence to reduce disruptions

Monitoring ongoing charger performance, optimising energy usage, and troubleshooting technical issues to minimise downtime.

Including load management, where we balance energy demand to maximise charging speed while avoiding overloading the grid, as well as integrating renewable energy sources like solar if desired.

Finance Management

Taking the finance headache away

Providing financial analysis on the impact on your operational costs and assisting with EV finance, including BOOM options (build, own, operate, maintain).

We provide guidance on commercial structures including grants, ensuring you have the flexibility you need in finance options to keep your costs low.

Advisory Services

We work with you in a way that works for you.

Providing customised advice that guides you step-by-step through every stage of the EV value chain.

Assessing your site, fleet needs, logistics, charging requirements, and your fleet strategy, to deliver a **customised EV fleet and charging solution** that takes into account your unique business needs.

Planning & Design

Designing with foresight in mind

Our planning helps you get electrical grid connection right for a streamlined approval process.

Our designs encourage sustainable load efficiency and cost-effective engineering, providing solutions that minimise grid augmentation, improve delivery timeframes and reduce project costs.

Accredited Network Design and Construction Provider

The unique experience we bring to network evaluations, upgrades, augmentation optimisation, and HV connections, means we service every part of the EV value chain with grid optimisation front of mind.

Seamlessly integrating your charging stations to the energy system is critical to success.

Installation & Commissioning

Tailoring to your installation needs

Conducting installation and commission of EV charging to your specified site design. Providing end-to-end installation of EV charging hardware and software that is specifically tailored to your site's needs. From the simple to the significantly complex.

Whether it is several slow chargers, a small number of fast chargers, a combination of slow and fast, or complex grid upgrades, we provide all the equipment needed, from grid and EV charging hardware to operating software and retail partnerships.

Maintenance & Service

Maintenance with focus on longevity & reliability

Looking after ongoing planned and unplanned maintenance, offering an increased workforce when demand is high and fleet uptime is critical. In-house maintenance software can also be explored for better ongoing service efficiency.
